# **National Industry Handbook**

**for**

# **Hospitals**

**November 1999**

The manuals that comprise the Hospital Handbook have been developed in consultation with key industry stakeholders, and were approved by Chief Executive Officers of the Commonwealth and State and Territory environment agencies for use by specific industries in early February 1999. These manuals include:

- Fossil Fuel Electric Power Generation;
- Fuel and Organic Liquid Storage;
- Combustion Engines;
- Combustion in Boilers; and
- Sewage Sludge and Biomedical Waste Incineration.

The Fugitive Emissions manual will also be included in this Handbook after it is approved.

NPI Handbooks are designed to help facilities that trigger an NPI reporting threshold to estimate their emissions. These facilities do not need to report to the NPI until a handbook is approved and published for their sector. The Emission Estimation Technique Manuals listed above for Hospitals will form, along with the NPI Guide, the Hospitals Handbook ANZSIC Code: 861 series.
